Subject: [EXTERNAL] Concerns with the proposed pipeline project

Good day,

I am a resident and business owner in Memphis, Tennessee and I am writing to voice concerns over the proposed pipeline. One-quarter of the proposed Byhalia Access pipeline travels over the unconfined area of the Memphis Sands Aquifer in Marshall and Desoto counties in Mississippi. The water flow between Mississippi and Tennessee is connected. This portion of the proposed pipeline path is where surface contamination can travel into the shallow aquifer where the protective clay layer is absent and contamination can make its way into the deeper aquifer causing irreparable damage to our region's drinking water source. I respectfully ask for a halt to the permitting process until proper research on the potential for ecological damage to the Memphis Sands Aquifer is conducted and findings presented for the public.

Thank you for your consideration and for your time in reading this letter,
